PrestaShop, magnalister, Updates, Updatebutton, Button

### Frage (öffentlich)

I can't update magnalister to its current version / I don't see an update button in my magnalister PrestaShop Plugin ... What should I do?

### Lösung (öffentlich)

Due to PrestaShop's safety regulations, we are not able to offer magnalister with a semi-automatic update function in the PrestaShop Addons Marketplace.

Every single update must be investigated and checked by PrestaShop. This process can take up to a couple of weeks, which makes it impossible for you to use the most recent version of magnalister. This means that, with the PrestaShop Addons Marketplace version of magnalister, you will not be able to use any of the recent magnalister improvements and bug fixes.

This is especially problematic when the marketplace releases critical changes that need to be implemented immediately.

Example:

You assume you are using the "most recent" PrestaShop Addons Marketplace version of magnalister and you are selling on Amazon in an optimal category for your business. Amazon is now making changes to this category and you are now unable to list your items in this category, because you do not have all mandatory magnalister updates in PrestaShops Addons Marketplace.

Solution:

Simply go to our website and download the most recent magnalister package and install it via FTP Free of charge.  
Please find the most recent version here:

[1]magnalister for PrestaShop installation package

Alternatively, you can also request installation service on our website. Simply log in, click at "Installation" and fill out the Installation request form. For this service we will charge \$33.50

This version of magnalister has an integrated update button in the top right corner. The update automatically starts when you click this button.
